# REMOTE PATIENT MONITORING

## Simple, At-Home Vitals Readings

Monitoring your vitals is critical to managing your health, and our Remote Patient Monitoring (RPM) program is here to help.

If you're a Medicare patient with certain health conditions such as high blood pressure, diabetes, or heart disease, please be expecting a call from our staff in the near future.

We'd like to discuss how real-time vitals monitoring will help you stay healthy.

## RPM BENEFITS

When you enroll in our RPM program, we'll provide the devices you need, show you how to use them, and match you with a personal Care Coordinator who will:

Familiarize you with your medical monitoring devices

Monitor your vital signs to make sure you're staying in a healthy range

Check in throughout the month to discuss your health

Track your health data so your physician can provide more informed care
